DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 17 September 2008 has been entered.

Election/Restrictions

Claims 59-62 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected system, there being no allowable generic or linking claim. Election was made **without** traverse based on an election by original presentation. See Office action of 25 April 2008.

Claim Objections

Claim 66 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 66 fails to further limit base claim 63 because claim 66 has the polarity of the toner particles reversed while claim 63 requires an enhancement of charge to an amount of about 103 phmo/cm. Claim 66 addresses a different aspect of the invention that is inconsistent with claim 63.

Claim Rejections - 35 USC § 112

Claims 47, 51-58, 63, 65, and 66 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The instant claims have been amended to specify the ionomer coating as increasing the chargeability of the toner particles to "about" 103 pmho/cm. This value is apparently derived from the evidence in the specification Table 5 for the difference in low field and high field conductivity noting the description at the bottom of page 9. Although Table 5 provide basis for a value of 103 pmho/cm and relative values below 103 pmho/cm noting Run Nos. 1 and 2, there is no disclosure of values above 103 pmho/cm. Values above 103 pmho/cm are permitted in the relative limitation of "about 103 pmho/cm" which includes values just above and below 103 pmho/cm. If there is basis for this limitation elsewhere in the specification applicants are asked to refer the Examiner to the proper page and line.

Claims 47 and 51-58 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear in independent claim 47 and the other claims by dependency what "colors" are being referenced in "(iii)" as having the same chargeability. The process does not disclose a plurality of colors in the toner particles or plural particles with different colors, nor would such embodiments necessarily be supported by the specification. Clarification is requested.

Conclusion

All rejections not repeated here are withdrawn based on the amendments to the claims.
